

Gopili continues its international development: now available in 10 languages & 19 countries

- Gopili aims to facilitate traveling in Europe independently of the language spoken
- It provides affordable travel options for train, coach, flights or ridesharing trips at the click of a button

May, 2017 - **Gopili** just made an important step forward on its international development. The French-based travel metasearch has launched its service in 5 new languages and 14 new countries. **Gopili's** service was already available in French, English, Spanish, Italian and German. From this week Mandarin Chinese, Russian, Korean, Turkish speakers (among others) can now search for their European journeys in **Gopili** on their mother tongues.

The multi-modal metasearch has expanded its services to 14 new country domains. Argentina, Chili, Mexico, Colombia and Peru in Latin America; Belgium, Russia, Turkey and Ukraine in Europe; Canada (French and English version) and United States in North America; and China, India and Korea in Asia. Users from those countries can now easily organize their trips around Europe thanks to **Gopili**.

How does it work?

The startup provides now cost-effective offers for train, plane, coach and rideshare journeys across a wide range of domestic and short-haul European destinations. The site scans over 500 different transport operators and drives 4 million visitors per month, with a conversion rate for rail carriers of "up to 20%".

Gopili's parent company is [KelBillet](#), launched in France and profitable since 2009. The company's international development started in 2014 with the launch of [Gopili.co.uk](#). In 2015 the website expanded to [Spain](#) and [Italy](#), and last year [German](#) and [Russian](#) markets were opened.

About gopili

Train. Coach. Rideshare. Plane. **Gopili** helps people to compare all transportation modes and find the best travel option for their journey. It aims to save time and money for travellers. Available on [gopili.com](#) and on mobile apps for [iOS](#) and [Android](#) users.
